I took inspiration from data analyses like Goodreads' Reading Challenge and Spotify's annual Wrapped. I started using Goodreads to track my reading progress back in 2023 for my AP Language class, and I thought it would be interesting to visualize over the years how the amount of books and pages have changed. Especially throughout major periods of time like my transition to college and my purchase of an e-reader, I thought there would be variation between both the length of books and the number of books I've read every year. Since I was focused on also mapping the day-to-day life, instead of taking the same approach with my music history I looked more at the spread of my listening habits across the hours, by the amount of time spent listening every hour throughout my entire Spotify history. Since the majority of the data I had on hand was only for the past 5 years or so, I also wanted to document important parts of me that have persisted throughout my entire childhood as well. Through that lens, I created the bar at the bottom with my career path, as well as a graph with an estimated representation of the varying lengths of hair I had as I grew up and entered college. I also sprinkled in fun facts I found while looking for data, like one week in October where I visited Acadia National Park and hit a total of 138,571 steps for the whole week. That also inspired me to make a map of where I've traveled to so far, which then led me to create an "inventory" of the things I wear and use the most.

One part of the visualization that I found interesting was how the lowest point in my listening history by hour was from 8 a.m. to 10 a.m. I was expecting the minimum to be closer to 4 to 6 a.m., when I'm always sleeping since I don't play music then. This revealed to me that I either stayed up later than I thought when I was younger, or classes and other obligations have consistently prevented me from listening to music during the mornings from 2019 to now.

I really enjoyed this assignment because it let me think creatively about how I could visualize many different aspects of a person. The freedom of expression led me to take a more sandbox approach, which can be seen through the Minecraft themes throughout the slide. If a stranger had to take away one message, I hope it would be how versatile data and life can be.
